Channel the value of your data with our reliable modular and scalable platform.

Pentaho Data Integration

Bring together a broad range of data sources into a single, integrated source of business intelligence, for analysis and reporting. With a single graphical interface, it's simple to deliver data to applications and use it for analytics, through one intuitive platform. It also reinforces the data pipeline and delivery across the business, to ensure data is in a fit state to use and capitalize on.

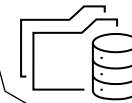

Pentaho Business Analytics

Our no-code data visualization enables our customers to explore and analyze their data, quickly build reports, and create custom data dashboards, without having to depend on IT or developers. Equipped with trusted, shareable data from across the business, we enable organizations to understand, analyze and activate their mission-critical data easily and confidently.

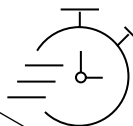

Pentaho Data Catalog

Eliminate the chaos of organizing and accessing data. Data owners and stewards can easily classify, evaluate and make trusted data available to data users. We support businesses to manage data and governance to any scale, across locations and users, while continually simplifying access to data that help to transform the organization.

Pentaho Data Optimizer

Intelligently manage and maintain data infrastructure. We optimize storage by evaluating data and providing easy tools to move it to the most cost-effective location, while ensuring regulatory requirements are satisfied.

Pentaho Data Quality

A comprehensive data quality solution that provides a scalable framework and ecosystem for data classification, observability, quality standards compliance and governance. We make it straightforward to discover, observe, measure and deliver data at scale, to support innovation and speed decision-making.
